EDUCATION

HANZE HOGESCHOOL | GRONINGEN, NETHERLANDS
BS IN COMPUTER SCIENCE
Spec. in Software Engineering
Graduated February 2014

DRENTHE COLLEGE | EMMEN, NETHERLANDS
INTERMEDIATE VOCATIONAL EDUCATION IN SOFTWARE DEVELOPING
Graduated July 2010

EXPERIENCE

TOPICUS LEGAL | SOFTWARE ENGINEER / ARCHITECT
February 2016 - present | Zwolle, Netherlands
In a very small team we worked on an application called Instrumenti, the flagship application of the new vertical of Topicus. The application landscape was designed to run in active-active mode and runs on docker. I also created a fully automated build pipeline in Jenkins for continuous delivery.

TOPICUS FINAN B.V. | SOFTWARE ENGINEER
February 2014 - 2016 | Zwolle, Netherlands
In a team of 10 people we work on an application that processes payment messages. We use Scrum to plan and prioritise the work items.

INVERSIVE MEDIA | SOFTWARE DEVELOPER
Juli 2013 - August 2013 | Groningen, Netherlands
After my internship I stayed at Inversive Media for a few months until I would start the Internship at Topicus Finan. I worked on the application 'Tafelreserveren.nl'. It is written in Java with Play Framework and PostgreSQL.

LEARNIT B.V. | PROGRAMMER
January 2011 - March 2013 | Groningen, Netherlands
My work here was diverse. Most of the work was related to the database, like creating exports and create queries to do mutations. The mutations were mostly because of problems in the applications. I worked on the frontend, it was written in Python.

SQUIDMEDIA | WEBDEVELOPER
May 2011 - November 2011 | Winsum, Netherlands
Most sites were written in Joomla or Squidmedia's own content management system, called DCT.

INTERNSHIPS

TOPICUS FINAN B.V. | SOFTWARE ENGINEER
September 2013 - February 2014 | Zwolle, Netherlands
For my graduation project I made an iOS application for iPads. This application shows the strategic management information. I wrote the REST backend in Java and with the Play Framework.

INVERSIVE MEDIA | SOFTWARE DEVELOPER
February 2013 - July 2013 | Groningen, Netherlands
Inversive Media bought address data from 'Basisregistraties Adressen en Gebouwen'. This was a dataset of 16GB and they wanted it transformed into a service. I created an import script that imported the 16GB of data into an Elasticsearch server. After this I wrote a REST service to query the addresses in multiple ways.
